168 0 10 alias sudo ifconfig lo0 192 168 0 11 alias Action 4: Set up ipfw to forward packets: sudo ipfw add fwd 127.

168 0 11 dst-port 80 You are done! Right now:. Phase 2: As you wear't have got a DNS server, you could setup your /etc/offers document, by incorporating: 192.. If i are correct, i would suggest to setup stuff like described below: stage 1: Assign at minimum two IP address to your Mac pc OS (one per domains), allow's state: 192.
